CHARACTERISTICS OF THE WEATHER FOR JULY, 1891.

majority of stations east of the 100th meridian, except in New England and east New York, the minimum temperature was the lowest ever noted for the season.

At stations on the middle and south Pacific coasts the month was the warmest July on record, and in the interior of the Pacific coast states south of Washington the maximum temperature was the highest ever reported for July.

The maximum temperature rose above 120° in the Colorado Desert, in the eastern part of San Diego county, Cal., and Gulf states and the lower Mississippi valley on the 5th and reached 122° at Furnace Creek, Death Valley, Cal.

, FROST.

of the 19th and 20th in upper Michigan and the north part of lower Michigan, of the 24th in South Dakota, of the 25th in lower Michigan, of the 28th in Connecticut, and of the 30th and 31st in north lower Michigan was reported injurious to tender vegetation.

PRECIPITATION.

The monthly precipitation was the greatest ever reported for July on the central New Jersey coast, in Arkansas, Indian Territory, south-central Kansas, north-central Montana, southeast Washington, and north-central California, and it was the least ever reported for July in New Mexico and extreme western Texas.

The month was the coolest July on record from the middle-|July average in the Atlantic and east and west Gulf states, on eastern Rocky Mountain slope to the Atlantic coast, and at a the eastern slope of the Rocky Mountains, over the northern plateau, the west part of the middle plateau region, and along the Pacific coast between the 35th and 45th parallels; elsewhere it was generally deficient.

STORMS.

Local storms were most frequently reported in the Dakotas, Nebraska, Kansas, Iowa, Michigan, New York, and Pennsyl. vania. Among the more severe storms were those in the west 6th, when great damage was done by high water at Galveston, Tex., on the 5th, and ten persons were killed and a number FROST.

Frost occurred at intervals in New England, New York, Pennsylvania, the upper lake region, Wisconsin, and Minnestate The frost of the 8th in Wisconsin and upper Michigan, and Minnestate The frost of the 8th in Wisconsin and upper Michigan, and Minnestate The frost of the 8th in Wisconsin and upper Michigan, and Minnestate The frost of the 8th in Wisconsin and upper Michigan, and the north part of the 10th and 20th in upper Michigan and and 20th in upper Mic injured.

U FLOODS.

Considerable damage was caused along the Missouri River south of Pierre, S. Dak., by high water during the first part of the month. The river cut its banks and changed its channel at several points, causing considerable damage to farm prop-

¿ j DROUGHT.

Drought prevailed in parts of lower Michigan, South Dakota, Kansas, Texas, Arizona, and Washington. In the early part of the month the weather was very dry in eastern Wisconsin. The monthly precipitation was generally in excess of the southern Illinois, southern Indiana, and parts of Kentucky.

ATMOSPHERIC PRESSURE (expressed in inches and hundredths).

plateau region and northeast British America. Over the east the mean pressure is generally below 29.90. Gulf states and Florida and on the north Pacific coast the For the current month the mean pressure was highest east

The normal distribution of atmospheric pressure over the mean pressure generally rises above 30.05, and over the west United States in July is influenced by the high areas of the part of the southern plateau region it falls below 29.85. In Atlantic and Pacific oceans, and the low areas of the southern the British Possessions north of North Dakota and Montana
